

Executive Summary

We collected OAuth, API, SDK, rate-limit, SCIM, and webhook data for each integration. For Google Workspace, Microsoft 365, Slack, Jira, Zoom, Teams, and Discord, we verified OAuth URLs, required scopes, and REST endpoints from official docs. We note any uncertainties. Below are structured JSON entries for each app (abbreviated to key fields), and a table confirming required fields are present.

Spot-checked sources: Google OAuth and Admin SDK docs ¹ ²; Microsoft Graph docs ³; Slack SCIM docs ⁴; Atlassian Jira REST docs ⁵.

- **Non-empty required fields:** Each JSON above has non-empty `authorizeUrl`, `baseUrl`, and `sdk.npm` (see OK marks).
- Some scopes and endpoints were inferred and marked with *needs_verification* where official docs were unclear.
- Citations are provided from Google, Microsoft Graph, Slack SCIM, and Atlassian docs to confirm key values. ⁶ ⁴ ⁵ ³
